RAMO

Una percha con forma de rama con un diámetro que puede oscilar de los 10 hasta los 14 mm, compuesta en un 50% por harina de madera.

Esta percha exige al pájaro modificar su postura, tal y como si estuviese posado sobre una rama natural. Esto permite al pájaro ejercitar sus músculos, una actividad importantísima que en otras perchas más convencionales no puede realizar.

A Perchas adecuadas para las jaulas:
Pagoda, Padoga Export, Serena, Irene 2
Medidas de la base: 44 x 27 x 11,5 cm
